

IFRS SUSTAINABILITY DISCLOSURE STANDARDS S1 & \$2

THIS INTERACTIVE WORKSHOP WILL START MOMENTARILY

The SSE is a UN Partnership Programme of

Welcome Remarks

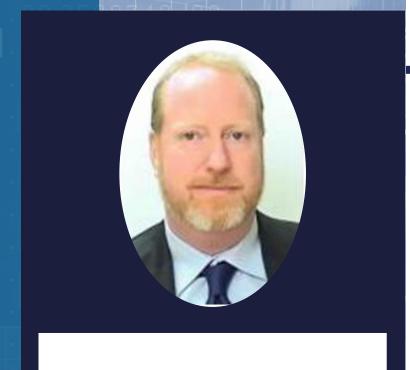

Eyüp KeleşSustainability Associate Director

Welcome Remarks

Veronika Pountcheva

ISSB Board Member, Senior Advisor to the Chair

Welcome Remarks

Garth Bedford

IFC Financial Institutions Group, Middle East, Central Asia, Türkiye, Afghanistan, and Pakistan (MCT) Financial Institution Advisory, Senior Operations Officer

HOUSEKEEPING

CHAT FUNCTION:

Use the chat box to introduce yourself and make comments.

Audio Settings

Raise Hand

↓ AUDIO SETTINGS:

All participants are currently muted to ensure everyone can hear the presenters. Please use the other functions to interact with us.

Q&A BOX:

Ask any questions you might have in the Q&A box. We will answer them throughout the session.

Today's Workshop

3.5 hours (+homework)

Live Q&A throughout

Participation expected

Certificate requires survey

HIU-YAN CHENG
Climate Risk Specialist

BELLA CHENG
Capacity Building Specialist

LEARNING OBJECTIVES

Understand the ISSB Standards

LEARNING OBJECTIVES

Understand how to use the ISSB standards

LEARNING OBJECTIVES

Identifying what steps can be taken to develop a disclosure plan

MODULE 1: PREPARE

What is the **case for** and **purpose of** sustainability reporting? How has the reporting **landscape evolved?**

Considering location, efficiency and user confidence when disclosing in general-purpose financial reports

□ → □ -**○← ○**← REPARE 483→1 Sustainable INEWENT Stock Exchanges

MODULE 2: ALIGN

What do companies have to disclose to align with the global baseline in IFRS S1 and S2? How can additional disclosures be integrated to meet geographical, sectoral and regulatory requirements?

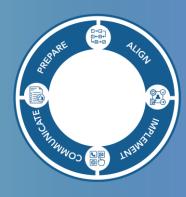

Identifying, evaluating, and integrating sustainability-related risks and opportunities

MODULE 3: IMPLEMENT

AGENDA

Duration: 3.5 hours	Topic:
20 minutes	Welcome & introductions
40 minutes	Module 1 – Prepare
40 minutes	Module 2 – Align part 1
5 minutes	Short break
35 minutes	Module 2 – Align part 2
35 minutes	Module 3 – Implement
30 minutes	Module 4 – Communicate
5 minutes	Homework and additional resources

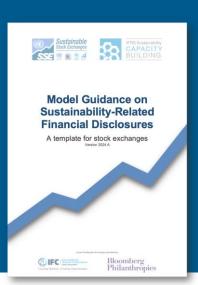

SSE TRAINING MATERIALS

Find all training materials on the SSE website –see link in chat.

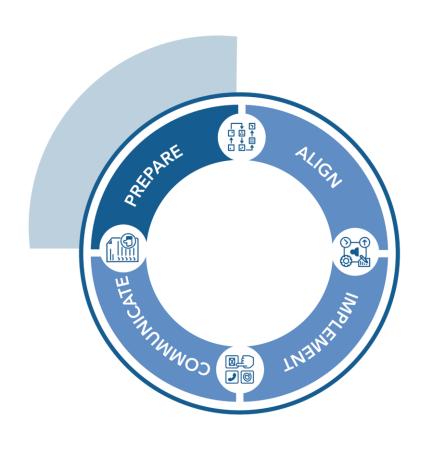

Visit www.menti.com and type the code that we are sharing in the chat

Why did you join today's training?

How much do you already know?

MODULE 1

Building a solid foundation of knowledge

PREPARE

PREPARE

PURPOSE LANDSCAPE GLOBAL STANDARD

The case for and market drivers of sustainability reporting

ZOOM POLL

Select the appropriate answer

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

1. What are your reasons for disclosing sustainability-related information?

(Select all that apply)

- a. Regulatory requirements
- o. Sharing management's objectives
- c. Societal expectations
- d. Investor interest
- e. Other (indicate in the chat)
- f. We are not disclosing sustainability-related information yet

Climate risks: Two main types

Physical risks

- Driven by changes in the physical systems as a result of climate change
- Incremental risks: Long-term changes in baseline conditions as a result of climate change
 - Increasing droughts
 - Desertification
 - Sea-level rises
- Extreme events: Short-term events that may be exacerbated or made more common by climate change
 - Heatwaves
 - Hurricanes
 - Fires
 - Floods

Transition risks

- Driven by the transformation of the economy due to climate action
- Policy risks
 - Regulatory or public policy actions that increase the costs of various activities (e.g., carbon taxes)
 - Regulations or restrictions on certain activities (e.g., fracking)
- Technology risks
 - Changing economics of low-carbon technologies that replace or challenge incumbent emitters (e.g., solar vs. coal)
- Market risks
 - Revaluation of assets based on shifts in demand or the recognition of potential stranded assets (e.g., fossil fuel reserves)
 - Changes in consumer preferences

Expected impact on global GDP by 2050^{1, 2}

	Temperature rise scenario, by mid-century				
	Well-below 2°C increase	2.0°C increase	2.6°C increase	3.2°C increase	
	Paris target	The likely range of glo	bal temperature gains	Severe case	
Simulating for economic loss impacts from rising temperatures in % GDP, relative to a world without climate change (0°C)					
World	-4.2%	-11.0%	-13.9%	-18.1%	
OECD	-3.1%	-7.6%	-8.1%	-10.6%	
North America	-3.1%	-6.9%	-7.4%	-9.5%	
South America	-4.1%	-10.8%	-13.0%	-17.0%	
Europe	-2.8%	-7.7%	-8.0%	-10.5%	
Middle East & Africa	-4.7%	-14.0%	-21.5%	-27.6%	
Asia	-5.5%	-14.9%	-20.4%	-26.5%	
Advanced Asia	-3.3%	-9.5%	-11.7%	-15.4%	
ASEAN	-4.2%	-17.0%	-29.0%	-37.4%	
Oceania	-4.3%	-11.2%	-12.3%	-16.3%	

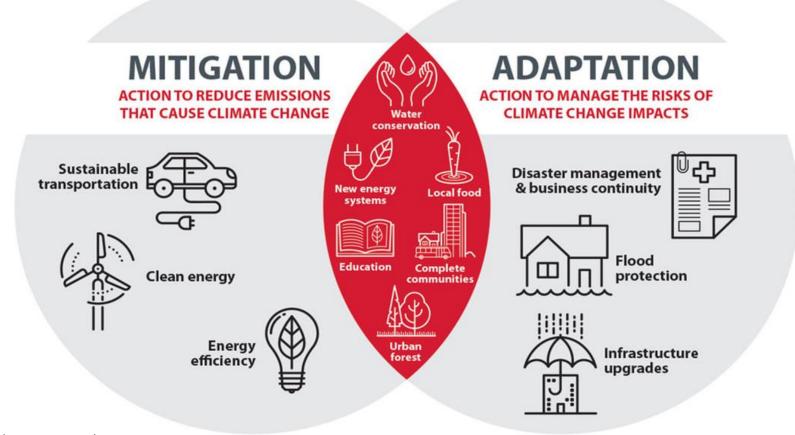

18% of global GDP could be at risk if no mitigating actions are taken¹

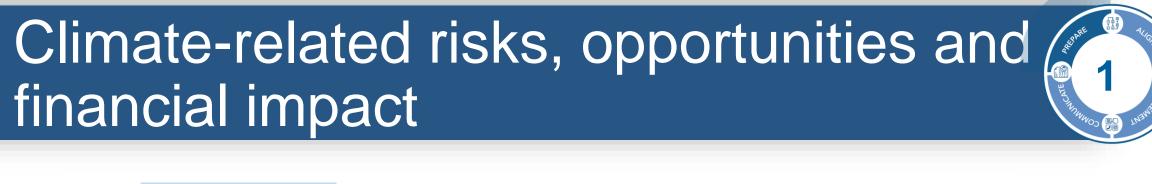

■ Each 1°C increase in global temperature can be linked to a 12% decline in global GDP²

1)Swiss Re, 2021; 2) NBER, 2024

Climate finance opportunities

Why do we need sustainability-related disclosure standards & regulations?

Regulatory compliance

Ensure compliance with new & evolving reporting standards

Gain competitive advantage Gain a competitive edge by become

Gain a competitive edge by becoming a leader in sustainability & attract investors & clients

Attract investment

Meet growing investor demand for transparency in sustainability-related risk management

Holistic risk management

Use standards to systematically identify where risks are for effective strategy to manage them

Build client trust

Build trust with clients by demonstrating a commitment to sustainable practices

Build resilience

Enhance ability to mitigate & adapt to material risks for long-term growth

PREPARE

ZOOM POLL

Select the appropriate answer

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

2. What frameworks are you currently using?

(Select all that apply)

- **a. CDP** (formerly Carbon Disclosure Project)
- b. Global Reporting Initiative (**GRI**)
- **C.** Integrated Reporting
- d. Sustainability Accounting Standards Board (SASB)
- e. Task force on climate-related financial disclosures (TCFD)
- f. UN Global Compact (UNGC)
- g. Others (indicate in the chat)

Structure of the IFRS Foundation

Public accountability

IFRS Foundation Monitoring Board

Governance, strategy, oversight

IFRS Foundation Trustees

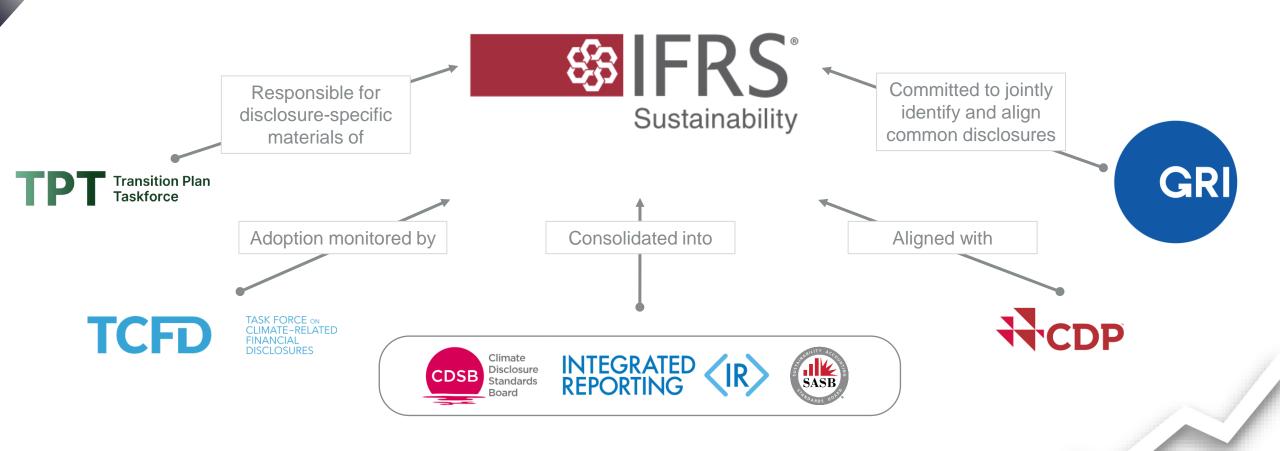

Independent standard-setting

International Accounting Standards Board (IASB)

IFRS Interpretations Committee (IFRIC)

International Sustainability
Standards Board (ISSB)

The evolution of reporting standards

ZOOM POLL

Select the appropriate answer

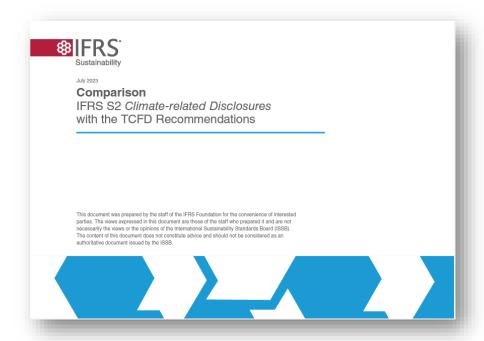

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

3. Companies who disclose using the TCFD recommendations automatically comply with the ISSB Standards.

- a. True
- b. False

Moving from TCFD to ISSB

- TCFD culminated in 07/2023 and the IFRS Foundation has now assumed responsibility of TCFD monitoring (see news item here)
- In some cases, IFRS S2 uses **different wording** to capture the **same information** as the TCFD
- IFRS S2 requires more detailed information that is in line with the TCFD
- IFRS S2 provides some additional requirements and guidance

Setting a global baseline

Additional building block can be added to meet:

- Jurisdiction-specific requirements
- Broader multi-stakeholder needs

ISSB Standards

- A comprehensive foundation of disclosures for global jurisdictional adoption
- Common language for comparable, decision-useful disclosures
- Designed to meet investor needs across global capital markets

Global backing for a global standard

ISSB

provide comprehensive global baseline through Standards

IOSCO

endorses ISSB Standards recommending adoption

Audit standard-setters

enhance and develop assurance standards

Jurisdictions

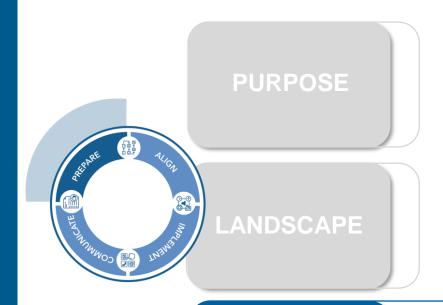

require by adopting the Standards

Market participants

voluntarily opt to apply the Standards

PREPARE

GLOBAL BASELINE

An overview of IFRS S1 and S2

Important terms

- Sustainability-Related Financial Information Information about a company's sustainability-related risks and opportunities that is useful to primary users of general-purpose financial reports in making decisions about providing resources to the company (IFRS S1.1).
- Sustainability-Related Risks & Opportunities—Those risks and opportunities that
 could reasonably be expected to affect the company's prospects i.e.: cash flows, access
 to finance or cost of capital over the short, medium or long term (IFRS S1.3).
- **General Purpose Financial Reports** Sustainability-related financial disclosures could be included in a company's management commentary or a similar report when it forms part of an company's **general purpose financial reports**.

Core content areas

GOVERNANCE

- Governing Body
- Management

STRATEGY

- Risks & Opportunities
- Effects on
 - a) business model & supply chain,
 - b) strategy
 - c) financial & cash

flows

Resilience

RISK MANAGEMENT

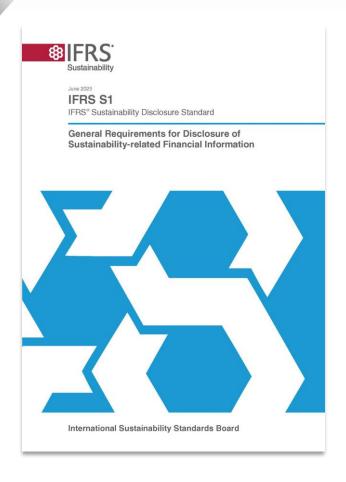

- Processes for risk management
- Overall risk profile

METRICS & TARGETS

- Metrics
- Targets

IFRS S1: General requirements

- Requires material information about sustainability-related risks and opportunities with the financial statements to meet investor information needs
- Applies Task Force on Climate-related Financial Disclosures (TCFD) architecture
- Requires industry-specific disclosures
- Refers to sources to help companies identify sustainability-related risks and opportunities and information beyond climate (IFRS S2)
- Can be used with any accounting requirements (GAAP)

IFRS S2: Climate-related disclosures

- Incorporates the TCFD recommendations
- To meet investor information needs, IFRS S2:
 - is used in accordance with IFRS S1
 - requires disclosure of material information about climate-related risks and opportunities, including physical and transition risks
 - requires industry-specific disclosures supported by accompanying guidance built on SASB Standards

IFRS S1 and S2 together

IFRS S2 is to be applied in accordance with IFRS S1 because S1:

- Establishes important conceptual foundations, e.g.: connected information, value chains
- Provides important guidance on the assessment of materiality
- Sets out the qualitative characteristics of the information to be provided, e.g.: relevant and faithful representation
- Sets out requirements and concepts for reporting, for example:
 - the reporting company
 - timing and location of reporting
 - connections and comparative information in reporting

Conceptual Foundations

- Fair presentation: A complete set of sustainability-related financial disclosures should fairly present all sustainability-related risks and opportunities that could reasonably affect the company's prospects
- Reporting company: The reporting company for sustainability-related financial disclosures to be the same as the reporting company for the general purpose financial statements.
- Connected information: IFRS S1 asks for information that enables understanding of the connections between –
 - sustainability-related risks and opportunities
 - disclosures on core content
 - sustainability-related financial disclosures and financial statements

EXAMPLE

Connected information

Decarbonisation is embedded in our annual investment and prioritisation processes. All investment decisions consider the quantity of GHG emissions associated with the project, the cost per tonne of CO₂-e associated with the project and the alignment with the Group pathways to a net zero trajectory.

In FY2023, we spent US\$122 million on initiatives associated with operational GHG emission reductions, together with value chain GHG emission reductions in areas such as steelmaking and shipping, and BHP Ventures investments. This figure does not include the operating expenditure associated with renewable electricity arrangements established at a number of our operated assets, which collectively represented the main source of operational GHG emission abatement for BHP in FY2023.

From FY2024 to FY2030, we expect to spend around US\$4 billion (nominal value) on operational decarbonisation, with plans reflecting an annual capital allocation of between approximately US\$250 million and approximately US\$950 million per year over the next five years.

On current assumptions, the overall portfolio of decarbonisation projects to support achievement of our medium-term target is expected to deliver a positive net present value (NPV) for the Group, while to date, most implemented projects have delivered a positive or neutral NPV.

BHP Ventures also continues to build a portfolio of investments to help accelerate innovation in the mining industry through assessment and execution of additional investments across emerging technology areas, including long-duration energy storage solutions, diesel displacement and carbon dioxide removal.

For more information on our range of investments to drive decarbonisation and sustainable growth refer to bhp.com/about/our-businesses/ventures

Connection between decarbonization and net zero strategy and investment decisions

Connection to future spending plans and targets

ZOOM POLL

Select the appropriate answer

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

4. What information should be considered for connected information?

(Select all that apply)

Connections between:

- a. Governance, strategy, risk management and metrics & targets
- b. Sustainability-related financial disclosures and financial statements
- c. Sustainability-related risks and opportunities

Materiality

- A company shall disclose material information about the sustainability-related risks and opportunities that could reasonably be expected to affect the company's prospects.
- Information is material if omitting, misstating or obscuring that information could reasonably be expected to influence decisions that primary users of general purpose financial reports make on the basis of those reports
- Primary users of general purpose financial reports are existing and potential investors, lenders and other creditors

Additional guidance

Application Guidance

Guidance, sometimes presented as an appendix to a Standard. This is just a question of location – this material is still a required piece of the standard

Accompanying Guidance

Guidance issued alongside a Standard to assist companies, demonstrating how the requirements in the Standard could be applied often using examples (non mandatory)

Educational materials

Separate materials developed to help companies apply the Standards

Published with the Standards.

Published over time to meet preparer needs.

ZOOM POLL

Select the appropriate answer

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

- 5. Water is a vital input to your business, but the ISSB Standards do not currently have a specific standard on water. What do you do:
- a. Do not disclose anything about water.
- b. Consult the sources of guidance listed by ISSB.
- c. Engage a consultancy to help.
- d. Copy your competitors' reporting.

Module 1 Summary

Start by understanding the benefits of improved disclosure

There can be **important benefits** externally (ie investors interest) and internally (ie enhanced resilience and strategy) from applying the ISSB Standards

Use the ISSB Standards as the baseline – build on top of that

ISSB Standards represent a global baseline for sustainability related financial disclosure that simplifies the landscape and provides a comprehensive foundation of disclosure that allows other building blocks of information to be added on top of ISSB

Be clear who your audience is

ISSB Standards plus guidance are designed to meet the needs of primary users of generalpurpose financial reports and follow the core principles of financial disclosures including fair presentation and connected information.

MODULE 1 ACTIVITY

How will you define the objectives for your sustainability disclosures?

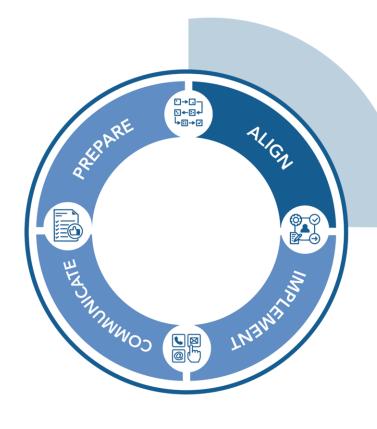

- 1. Setting the goals: Be clear on what you are trying to achieve through your sustainability disclosures, or any plans to adapt them.
- 2. **Define requirements**: Identify what reporting requirements you are seeking to meet through your disclosures, such as jurisdictional requirements or standards.
- 3. Consider where you are now: What is missing in your current disclosures to allow you to achieve this?

Visit <u>www.menti.com</u> and type the code that we are sharing in the chat

What objectives are you aiming to achieve through your sustainability disclosures?

MODULE 2

Setting the direction: Applying the ISSB standards & integrating additional disclosures

ALIGN

- Metrics
- Targets

Ruestions to evaluate (governance)

Questions pertaining to the reporting company's **governance**, that can help identify key information that can assist a company to meet some of the disclosure requirements:

- Which Board and Management bodies or committees are responsible for sustainability and climaterelated risks and opportunities?
- What are their skills and competencies? (How is this determined?)
- What processes and controls do they use for managing risks and opportunities?
- How and when do they get informed about risks and opportunities?
- What are their roles and responsibilities?
- What sort of decisions do they make and what targets do they set based on risks and opportunities?
- How are related performance metrics included in remuneration policies?

Note: Avoid unnecessary duplication

Board and oversight

O Group governance Sustainability governance

Climate-specific working groups Wealth Management specific Private Assets specific

Forum

Information

Description

2022 activities on climate and nature

Board Audit and Risk Committee (BARC)

Chair: Schroders plc independent non-executive Director

Membership: Independent non-executive Directors of Schroders plc

Meetings: 5

The BARC is a Board Committee and is responsible for overseeing financial reporting, risk management and internal controls, internal and external audit. The BARC receives reports from management on key risks to ensure they are considered at Board level. Oversight of key risks is essential to the delivery of the Group's overall strategy, and the BARC provides an update to the Board quarterly.

- As 'ESG risk including climate change' is identified as a key business risk, the BARC received information quarterly in order to assess how it is being managed
- Consideration and discussion of external reporting requirements for climate-related disclosures

Group Management Committee (GMC)

Group Strategy Committee (GSC)

Chair: Group Chief Executive

Membership: Senior management from across the Group

GMC Meetings: 11

GSC Meetings: 15

The GMC comprises the wider senior management team and is an advisory committee to the Group Chief Executive on the day-to-day running of the Group's business.

The GSC comprises the senior management team who have primary responsibility for the development and delivery of the Group's strategy. It is an advisory committee to the Group Chief Executive.

- The GMC considered the Group's strategy and key risks, including climate, ahead of submission to the Board
- The GMC reviewed the sustainability annual update which included how sustainability trends were shaping our industry and the progress in our priority areas which included climate change and biodiversity
- · The GSC discussed climate and nature-related issues as part of the delivery of the Group's strategy

Group Risk (GRC)

Chair: Chief Financial Officer (CFO)

Membership: Senior management from across the Group

Meetings: 10

The GRC assists the CFO in discharging his responsibilities in respect of risk and controls. The executive oversight of risk is delegated by the Group Chief Executive to the CFO. The GRC reviews and monitors the adequacy and effectiveness of the Group's risk management framework, including relevant policies and limits. It also reviews emerging risks and developments to our internal key risks, one of which is 'ESG risk including climate change'.

- Reviewed the description and framework of 'ESG risk including climate change' and an assessment of risk position versus risk appetite for this risk
- Reviewed the following topics: Sustainability and Impact frameworks across Private Assets, Internal Audit ESG Framework, ESG integration for counterparty selection

Committee

Chair: Group Chief Executive

Membership: Senior management from across the Group

Meetings: 6

The GSI Committee provides advice to the Group Chief Executive to assist him in discharging his responsibilities regarding sustainability and impact. The Committee considers, reviews and recommends the overall global sustainability and impact strategy, including key initiatives, new commitments and policies to the Group Chief Executive for approval. The Global Head of Corporate Sustainability and Global Head of Sustainable Investment are members of the Committee and report annually to the GMC and the Board. The GSI Committee monitors progress towards our goals, including progress towards our science-based targets.

- Reviewed the progress against our climate change strategy and delivery plans for our science-based targets, including climate engagement for investee companies, operational action plan and supply chain engagement strategy
- Discussed and reviewed our CDP 2022 response
- Discussed and recommended for approval our Group Climate Change Position Statement and Group Nature and Biodiversity Position Statement

G Core content

GOVERNANCE

- Governing Body

STRATEGY

- Risks & Opportunities
- Effects on
 - a) business model & supply chain,
 - b) strategy
 - c) financial & cash

flows

Resilience

RISK MANAGEMENT

- Processes for risk management
- Overall risk profile

METRICS & TARGETS

- Metrics
- Targets

Questions to evaluate (strategy – risks and opportunities)

Questions pertaining to the reporting company's **sustainability-related risks and opportunities**, that can help identify key information that can assist a company to meet some of the disclosure requirements:

- What risks and opportunities that could reasonably be expected to affect a company's prospects have been identified?
- Over what time horizons (short, medium or long term) is that effect expected to occur?
- If it is a climate-related risk, is it a physical or transition risk?

(全) Time horizons

Cash flow, investment and business cycles

Planning horizons for strategic decision-making and capital allocation

Assessment periods used by investors

Life of assets

- Time horizons are company specific and may include industry specific characteristics
- You don't have to stick to one time horizon. It depends what you are trying to strategise for and why see for example Three Horizons Framework

Questions to evaluate (strategy - effects)

Questions pertaining to **the current and anticipated** effects of the sustainability-related risks and opportunities, that can help identify key information that can assist a company to meet some of the disclosure requirements:

- What are the current and anticipated effects of those risks and opportunities on the company's business model and value chain, strategy and decision making, and financial position, performance and cash flows?
- What type of effect is expected and where will that effect take place?
- What is the actual and planned response to the effects identified?

Questions to evaluate (strategy - resilience)

Questions pertaining to the resilience of organizational strategy and business model to sustainability risks, that can help identify key information that can assist a company to meet some of the disclosure requirements:

- What is the company's capacity to adjust to the uncertainties arising from sustainability-related risks (and how this is determined)?
- How is a scenario analysis already being used (or going to be used) to assess climate resilience?

Qualitative and quantitative disclosures

When reporting the effects of sustainability-related risks and opportunities on a company's **current and anticipated financial performance**, **financial position and cash flows**:

- A company is required to disclose both quantitative (a single amount or a range) and qualitative information
- A company can provide qualitative rather than quantitative information when:
 - The financial effects of the risk or opportunity are not separately identifiable
 - There is a high level of measurement uncertainty
 - For anticipated effects, quantitative information would not be commensurate with the company's skills, expertise and resources

ZOOM POLL

Select the appropriate answer

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

- 6. A company may choose to disclose only qualitative information and/or combined quantitative information about current and anticipated financial effects when:

 (Select all that apply)
- a. The company cannot separate the effects of a climate-related risk or opportunity from other effects.
- b. There is a high level of measurement uncertainty.
- c. The quantitative information sheds a negative light on the company.

Example for Strategy: NatWest TCFD report, 2022¹

Opportunity	Related NatWest Group ambition	Expected time horizon	Potential financial impacts on NatWest Group
Supporting customer transition to net zero	We have a target to provide £100 billion climate and sustainable funding and financing between 1 July 2021 and the end of 2025. As part of this we aim to provide at least £10 billion in lending for EPC A and B rated residential properties between 1 January 2023 and the end of 2025.	Short	 Increase in volume of climate and sustainable funding and financing, on and off-balance sheet. Increased balance sheet volumes through demand for new products and services that support customer transition. Reduced balance sheet volumes related to energy inefficient homes. Additional expenditure to develop new products and services. Decrease in emissions due to customer transition.
	We have an ambition to support our UK mortgage customers to increase their residential energy efficiency and incentivise purchasing of the most energy efficient homes, with an ambition that 50% of our UK mortgage portfolio has an EPC rating of C or above by 2030.	Short – Medium	
Helping to end the most harmful activities	We plan to phase-out of coal for UK and non-UK customers who have UK coal production, coal-fired generation and coal-related infrastructure by 1 October 2024, with a full global phase-out by 1 January 2030.	Short – Medium	 Reduced exposure to coal customers. Reduced exposure to upstream oil and gas and reduced geographical footprint of upstream oil and gas financing.
	We will only support upstream oil and gas companies where the majority of assets being financed are based in the UK (onshore or offshore UK Continental shelf) and where those companies report to us the overall emissions of operated assets by the end of 2023. We stopped lending and underwriting to major oil and gas producers unless they had a Credible Transition Plan aligned with the 2015 Paris Agreement in place by the end of 2021.		
(%) (53)	We plan to collaborate cross industry and create products and services to enable customers to track their carbon impact.	Short – Medium – Long	 Increased balance sheet volumes through demand for new products and services that support customer transition. Additional expenditure to develop new products and services.
Powerful partnerships and collaborations			
6	We have a target to reduce emissions from our direct own operations by 50% by 2025, against a 2019 baseline.	Short	Increased expenditure to support reduction in carbon footprint in our own operations. Reduced expenditure related to energy, travel and water management.
Getting our own house in order	We plan to use only renewable electricity in our direct own global operations by 2025 (RE100) and improve our energy productivity 40% by 2025, against a 2015 baseline.	Short	
	We plan to install electric vehicle charging infrastructure in 15% of large office spaces across our UK portfolio by 2025 and upgrade our fleet of c.100 vehicles to electric models by 2025 (EV100)	Short	
	We plan to reduce emissions for our operational value chain 50% by 2030, against a 2019 baseline.	Medium	

GFANZ's net-zero transition plan framework across all types of financial institutions

The GFANZ workstream on portfolio alignment

Financial institutions' portfolio alignment measurement framework¹

Step 1

Translating scenario-based carbon budgets into benchmarks

Step 2
Assessing counterparty-level alignment

Step 3
Assessing portfolio-level alignment

Judgement 1: What type of benchmark should be built?

Judgement 2: How should benchmark scenarios be selected?

Judgement 3: Should you use absolute emissions or intensity?

Judgement 4: What scope of emissions should be included?

Judgement 5: How should emissions baselines be quantified?

Judgement 6: How should forward-looking emissions be estimated?

Judgement 7: How should alignment be measured?

Judgement 8: How should alignment be expressed as a metric?

Judgement 9: How do you aggregate counterparty-level metrics into a portfolio-level score?

The UK TPT Disclosure Framework¹

PRINCIPLES Ambition Accountability Action DISCLOSURE 2. Implementation 3. Engagement Strategy 4. Metrics & Targets 5. Governance 1. Foundations **ELEMENTS** Strategy 4.1 Governance, engagement, DISCLOSURE 3.1 Engagement with value 5.1 Board oversight and 1.1 Strategic Ambition 2.1 Business operations business and operational SUB-ELEMENTS chain reporting metrics and targets 5.2 Management roles, 4.2 Financial metrics and 1.2 Business model and value 3.2 Engagement with industry responsibility and 2.2 Products and services plan & a chain targets accountability 3.3 Engagement with 1.3 Key assumptions and 4.3 GHG metrics and targets 2.3 Policies and conditions 5.3 Culture government, public sector, external factors communities, and civil society 5.4 Incentives and 2.4. Financial planning 4.4 Carbon credits renumeration 5.5 Skills, competencies and training

This Framework adopts ISSB's definition of transition plan & a financial materiality perspective ¹

Example of a bank's transition plan: HSBC's 2024 Net Zero Transition Plan¹ (1/4)

1. Outlining principles & overall strategic approach

- Science-based, transparent and accountable
- Integrating nature
- Just and inclusive

2. Including strategy to assist sector transitions

- Energy supply
- Transport
- Heavy industry
- Real estate
- Food, forest and other land use

3. Outlining implementation plan

- Supporting customers' transition
- Embedding net zero into operation
- Partnership for systemic change

Example of a bank's transition plan: HSBC's 2024 Net Zero Transition Plan¹ (2/4)

Emissions trend

Requests the customer's current and historic scope 1, 2, and 3 greenhouse gas emissions, including the completeness of the company's emissions reporting and whether it has been validated by a third party.

Ambition of plan

Indicates whether the customer has announced a commitment to net zero and set interim targets to reduce emissions over the short, medium, or long term and across relevant emission scopes.

Credibility of plan

Identifies details of the customer's plans to achieve its ambition, including the specificity of these plans (for example, the investment required) in the context of its business activities, current source of emissions, and operating context.

Credibility of action

Requests evidence of actions that the customer has taken to implement its plan and reduce emissions. This may include how the customer is engaging stakeholders to deliver its plan and the actions it is taking to support a just transition and protect natural capital and biodiversity.

Climate risk

Considers physical and transition risks to which the customer may be exposed (see *Managing risk in transition to net zero* on page 64).

Customer engagement

- Assess the robustness of customer transition plans to guide engagement and financing solutions.
- Offer tailored one-on-one engagement with select corporate and institutional customers to understand and support their specific transition needs.
- Thought leadership, research, and events to inform customers about sustainable investment opportunities and market insights.

74

Example of a bank's transition plan: HSBC's 2024 Net Zero Transition Plan¹ (3/4)

Financing sustainable infrastructure

Overcoming challenges to financing and investment in sustainable infrastructure to help decarbonise energy systems and hard-to-abate demand-side sectors, such as steel or cement.

Scaling new economy companies

Scaling the new economy, including funding companies developing the climate technology solutions that can accelerate systemic change.

Ecosystem collaboration for supply chain decarbonisation

Collaborating across ecosystems with large corporate customers, their suppliers, and other stakeholders to help decarbonise supply chains.

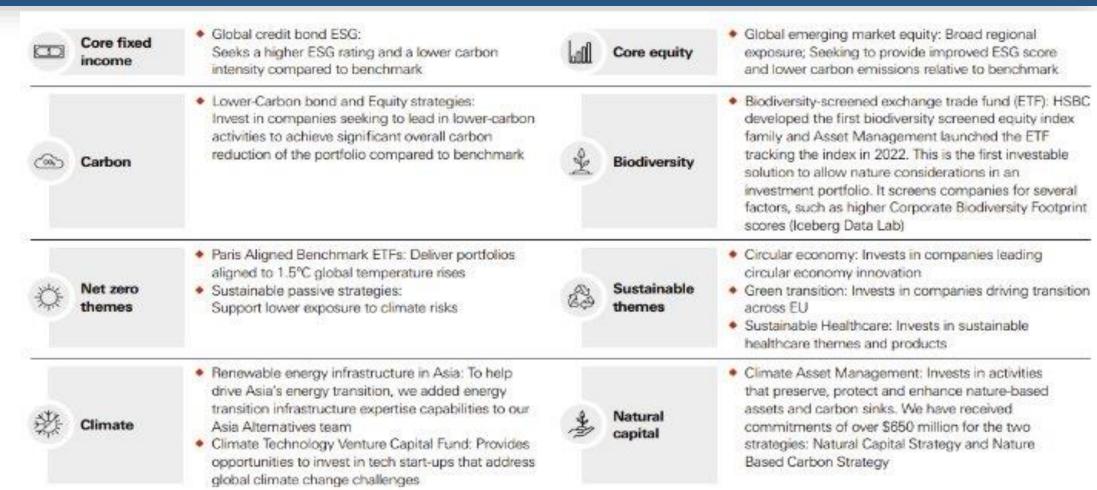

Establishing natural capital as an asset class

Enabling positive outcomes for nature and mainstreaming nature-regenerative action by developing natural capital as an asset class.

Transition solutions for customers

- Finance the transition through on-balance sheet lending and related services.
- Facilitate capital by connecting investors with issuers (for bonds and equity) and offering ESG insights.
- Generate financial innovations to finance projects critical for the transition that are hard to fund.
- Offer deal advisory solutions, including mergers and acquisitions (M&A).
- Provide enabling solutions like foreign exchange, risk management (e.g., hedging), and cash management.

Example of a bank's transition plan: HSBC's 2024 Net Zero Transition Plan¹ (4/4)

QUICK BREAK

Over the break, feel free to ask any questions you have in the Q&A.

Questions to evaluate (risk mgmt.)

- What processes and policies are being used to identify, assess, prioritise and monitor sustainability-related risks?
- What processes and policies are being used to identify, assess, prioritise and monitor sustainability-related opportunities?
- How is sustainability risk & opportunity management integrated into the company's overall risk management process?

Example for risk management disclosure a) - Mizuho Financial Group 2023 TCFD report¹

infrastructure and

including people,

goods, and money

governance,

Risks with the potential to materialize within approximately five years and that would have a major impact on the Mizuho Group

Risks with a high level of probability and impact, and aggregate risks with a high level of similarity/relevance

A wide range of internal and external potential risks identified as having the potential to harm our corporate value

Implementation tip:

Financial institutions describe the organization's processes & policies for identifying and assessing climate-related risks. It's also important to discuss how the steps connect with each other.

 The bank illustrates how climate-related risks are identified and shows how they are monitored within their risk management framework.

and business

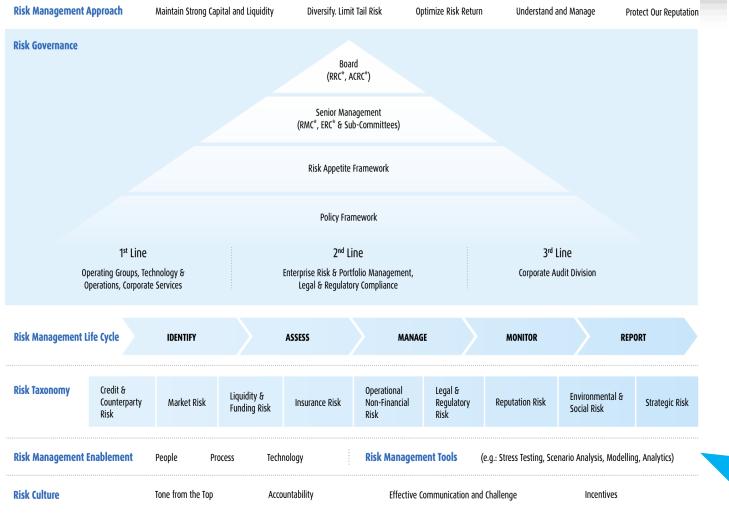

tečhnological

regulatory trends.

innovations, etc.

landscapes,

Example for risk management disclosure b) - Bank of Montreal (BMO) 2023 TCFD report¹

Product offerings

- Green, social and sustainability-labelled bonds for sustainability and climate transition projects (global)
- Sustainability-linked bonds that have linked financial terms with sustainability performance targets (global)
- Loans with dedicated green and/or social use of proceeds or sustainability-linked loans that link pricing incentives to sustainability performance targets (global)
- Sustainability-linked derivatives that reward ESG performance (global)
- Sustainability-linked deposits with interest benefits tied to the achievement of sustainability performance targets (global)
- Sustainable finance loan guarantee program in partnership with Export Development Canada, helping Canadian exporting companies finance decarbonization projects (Canada)
- Sustainable trade and supply chain finance that incentivizes sustainability, transparency and traceability of supply chains (global)
- Financing partnership with the Canada Infrastructure Bank to incentivize and fund building energy retrofits (Canada)
- Compliance and voluntary carbon offsets (global)

Service capabilities

- ESG advisory services to help clients navigate pressing questions about ESG, and climate and energy transition, in the context of shifting regulatory and market expectations
- Carbon market expertise, through BMO Radicle, in carbon credit development, trading in environmental commodities (including compliance and voluntary carbon markets), climate advisory solutions, and technology-driven emissions quantification and management

Implementation tip:

Financial institutions should disclose their process for identifying, assessing, prioritising and monitoring climaterelated opportunities.

Example for risk management disclosure b) - Lloyds Banking Group's 2023 annual report¹

Implementation tip:

Financial institutions should disclose their process for identifying, assessing, prioritising and monitoring climaterelated opportunities.

Opportunities	Driver	Time Horizon
Increasing consumer preference for sustainable products including in relation to our pension offering, sustainability-linked loans, fnancing of EVs and home improvements	Transition (Technology, Market)	Short, medium, long
Providing finance to support investment in climate-related technology	Transition (Technology, Market)	Medium, long
Develop products to promote climate resilience such as the Build Back Better scheme for home insurance	Physical Transition (Technology, Market)	Short, medium, long
Reducing the emissions from our direct operations	Transition (Reputation, Technology, Market)	Short, medium, long
Develop industry partnerships to help drive energy-effcient solutions for our customers and build knowledge on how we can further support our customers and suppliers to transition	Transition (Technology, Market, Policy, Reputation)	Short, medium, long

Example for risk management disclosure c) - Llyods Banking Group 2023 annual report¹

Implementation tip:

Financial institutions should consider how key climate risks and opportunities are integrated into their overall risk management practices.

The firm considers climate risk in its Enterprise Risk Management Framework and discusses how major climate-related risks such as credit risk fit into its risk management, portfolio management and case management processes.

1) Lloyds Banking Group, 2023

GOVERNANCE

flows

Resilience

RISK MANAGEMENT

- Processes for risk management
- Overall risk profile

METRICS & TARGETS

- Metrics
- Targets

Questions to evaluate (metrics)

- What metrics are being used to measure and monitor sustainability-related risks and opportunities?
- What metrics specifically relate to climate-related risks and opportunities?
- What industry-based metrics are being used?
- How are these metrics defined and calculated?
- How is performance tracked, using these metrics?

Metrics considerations

Metrics must:

- Enable primary users to understand the company's performance on sustainability-related risks and opportunities
- Be reported by an applicable IFRS Sustainability Disclosure Standard e.g. IFRS S2
- Include metrics the company uses
- Be associated with industry-specific business models, activities and common features
- Be consistent over time

Metrics can:

- Be taken from a source other than ISSB Standards
- Be developed by the company
- Be associated with the industry-specific business models, activities and common features (an company shall refer to and consider the applicability of the metrics associated with the disclosure topics included in the SASB Standards)

Questions to evaluate (targets)

- Are targets set by the company or by law or regulation?
- Are the targets used qualitative or quantitative?
- What is the associated metric used to set the target? (also see questions on metrics)
- Over what period of time do the targets apply and what base period is being used?
- What milestones and interim targets are being set to track progress?
- Have there been any revisions to the target since the last reporting period?

Find a summary of requirements in the SSE Gap Analysis Checklist here

ZOOM POLL

Select the appropriate answer

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

7. What is the objective of metrics?:

(Select all that apply)

To enable report users to:

- a. Understand performance in relation to company's sustainability-related risks and opportunities.
- b. Understand progress towards any targets.
- c. Understand the company's assumptions for the future.

Companies shall disclose (measured in accordance with the GHG Protocol Corporate Standard):

- Scope 1: direct emissions
- Scope 2: indirect emissions from the generation of purchased energy consumed by the company
- Scope 3: all other indirect emissions that occur in the company's value chain
- Whether an internal carbon price is used for decision making
- Any climate-related considerations for executive remuneration

Overview of the PCAF Standards on Financed Emissions¹

Listed Equity and Corporate Bonds

EVIC or Total company equity + debt

EVIC = enterprise value including cash

Business Loans and Unlisted Equity

EVIC or Total company equity + debt × Company emissions

EVIC = enterprise value including cash

Project Finance

GHG accounting for seven asset classes

Commercial Real Estate

Mortgages

Motor Vehicle Loans

WHAT is financed emission:

Absolute emissions that banks and investors finance through their loans and investments (Portfolio emissions are on average 700 times greater than direct emissions¹)

WHY measure financed emissions:

- Enable transparent climate disclosures
- Identify (transition) climate risks & opportunities
- Informs emissions reductions / net-zero targetsetting & transition planning

HOW do PCAF Standards work?

- A global, standardized framework for **GHG** accounting (including emission removals) for the *financial industry*
- Aligned with the **GHG Protocol** Scope 3 Category 15 Investment Activities
- IFRS S2 (Para. 29aii): An entity shall "measure its GHG emissions in accordance with the GHG Protocol"
- IFRS S2 (Paragraph 29avi (2): For financial institutions, Scope 3 emissions disclosures should include "additional information about...Category 15 [of Scope 3 emissions of the GHG Protocol] for financed emissions"

1) PCAF, 2022; 2) CDP, 2020

Example for financed emissions disclosures – HSBC 2024 Net Zero Transition Plan¹

Sector		HSBC on-balance sheet 2030 financed emissions targets (versus 2019 baseline) ^a	Key transition technologies and stra	ategies
Energy supply	Oil and gas	34 per cent reduction of absolute financed emissions (Mt CO ₂ e)	Clean fuels Clean electricity	Carbon capture and storage
	Power and utilities	Emissions intensity of 138 tCO ₂ /GWh	Clean electricity Grid infrastructure improvements (inc. smart grids) and storage	Thermal coal phase-out Storage and flexibility Carbon capture and storage
Transport	Automotive	Emissions intensity of 66 tCO ₂ /million vkm	Electric vehicles and smart mobility Smart mobility	Infrastructure Public transport improvements
	Aviation	Emissions intensity of 63 tCO ₂ /million rpk	 Sustainable aviation fuels Electric, hybrid, and hydrogen- fuelled aircraft 	 Improvements to operational and aircraft efficiency Route optimisation
	Shipping	No target set; assessing data availability, methodologies and materiality of our portfolio.	Clean fuelsOptimising vessel routes	Improved vessel design Clean port infrastructure
Heavy industry	Cement	Emissions intensity of 0.46 tCO ₂ /t cement	 Clean electricity Clean fuels Clinker substitutes 	Carbon capture and storage Recycling Energy efficiency
	Chemicals	No target set; assessing data availability, methodologies and materiality of our portfolio.	Alternative feedstocks Clean hydrogen Elimination of single-use plastics	Carbon capture and storage Recycling
	Iron, steel and aluminium	Emissions intensity of 1.05 tCO ₂ /t metal	Recycling and secondary production Clean electricity Carbon capture and storage	Inert anodesClean fuelsUpgraded raw materials
	Mining	Thermal coal mining specific target of 70 per cent reduction of absolute financed emissions ^b Approach to be defined for other mining	 Thermal coal phase-out Transition metals Decarbonisation of on-site operations 	Clean electricity CCS technology Alternative beneficiation and extraction
Real estate	Commercial and residential	No target set; assessing data availability, methodologies and materiality of our portfolio.	 Energy efficiency Low-carbon heating or cooling On-site clean energy generation 	Reduce embodied emissions Smart buildings/homes
Food, forests a other land use	ind	No target set; assessing data availability, methodologies and materiality of our portfolio.	 Reduce Waste Low-carbon consumption Sustainable supply chains (preventing deforestation, low carbon) 	 Nature restoration Low carbon agriculture (precision agriculture; alternative proteins, pesticides and fertilisers; vertical farming)

Interoperability considerations for GHG emissions when applying GRI Standards and ISSB Standards

Contents

Introduction 1
Analysis of requirements in GRI 305 and IFRS S2 related to GHG emissions 2–4
Mapping of requirements in GRI 305 and IFRS S2 related to GHG emissions 5–12

Introduction

This document illustrates the areas of interoperability between GRI 305: Emissions 2016 (GRI 305) and IFRS S2 Climate-related Disclosures (IFRS S2) that a company should consider when measuring and disclosing Scope 1, Scope 2 and Scope 3 greenhouse gas (GHG) emissions in accordance with both Standards. ¹²

This document is not a comprehensive assessment of the requirements in GRI 305 and IFRS S2. When applying GRI or ISSB Standards, preparers must refer to the GRI and ISSB Standards respectively, including their respective definitions of materiality.

According to the ISSB Standards, information is material if omitting, misstating or obscuring that information could reasonably be expected to influence investor decisions, ISSB Standards are founded in protein the information position the internetion position the internetion position than in the internetion position of investors.

According to the GRI Standards set by the Global Sustainability Standards Board (GSSB), a topic is material when it represents an organisation's most significant impacts on the economy, environment and people, including impacts on their human rights. GRI Standards are focused on meeting the information needs of stakeholders, including investors.

This document uses the 2016 version of GRI 305, which is currently under revision, and will be updated to reflect changes to GRI 305.4

- This document does not analyse the circumstances in which companies are required to provide disclosures on GHG emissions.
- 2 The GRI Standards use 'organization' to refer to preparers and apply to all types of organizations and the ISSB Standards use 'entity' to refer to preparers. This document uses 'company' as an umbrella term.
- 3 An entity need not disclose information otherwise required by ISSB Standards if the information is not material, even if an ISSB Standard contains a list of specific requirements or describes them as minimum requirements (paragraph B25 of IFRS 51).
- See https://www.globalreporting.org/standards/standards-development/project-for-climate-change-standard-

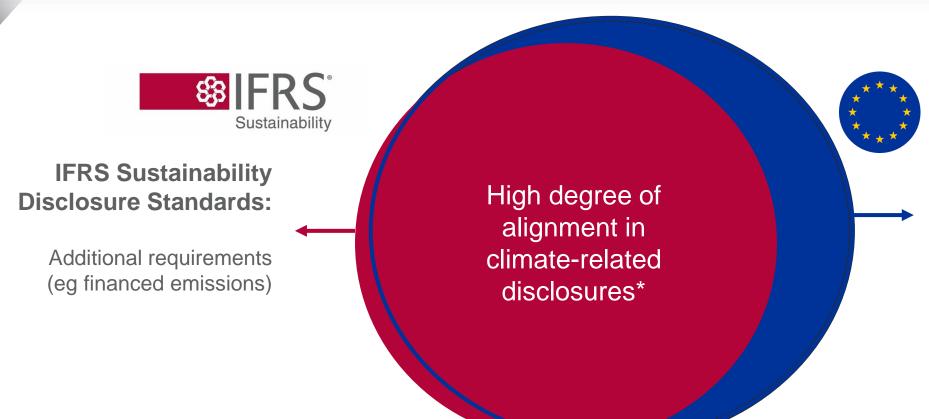

- GRI and IFRS Foundation are committed to jointly identify and align common disclosures that address information needs under the distinct scopes and purposes of respective standards, for both thematic and sector-based standard-setting
- GRI and IFRS Foundation published analysis and mapping for disclosing Scope 1, Scope 2 and Scope 3 GHG emissions with both GRI and IFRS S2
- Collaboration to deliver full interoperability, starting with GRI 101 Biodiversity Standard and ISSB's project on Biodiversity, Ecosystems and Ecosystem Services
- IFRS Foundation a convening partner of GRI's Sustainability Innovation Lab in Singapore

ESRS and **ISSB**

ESRS:

Additional requirements for stakeholders interested in impacts (that do not create risks or opportunities for a company's prospects) and information that, if missing or obscured, is not reasonably expected to affect investor decisions

^{*} To read more on this, view the newly released ESRS-ISSB Standards Interoperability Guidance here.

Integrated Reporting

- The Integrated Reporting Framework and the requirements in IFRS S1 and IFRS S2 are complementary tools for investorfocused communications
- When used together with the ISSB Standards, the Integrated Reporting Framework can support a holistic view of the value creation process and provide a more complete picture of how value is created over time while meeting investor needs for material, comparable, consistent and reliable information on sustainability and climate-related information on risks and opportunities
- We have shown that there is clear fit between the disclosure requirements in IFRS S1, IFRS S2 and the IR Framework through:
 - Dedicated FAQs
 - A mapping tool
 - A getting started guide to Integrated Reporting

Integrated Reporting (2)

How to apply the Integrated Reporting Framework with IFRS S1 and IFRS S2: A mapping tool

This table maps IFRS S1 and IFRS S2 core content disclosure requirements to the Integrated Reporting Framework content elements, showing one possible way to incorporate IFRS S1 and IFRS S2 disclosures within an integrated report. Thus the mapping does not capture all disclosures required by IFRS S1 and IFRS S2.

To comply with ISSB Standards, an entity must comply with the requirements as set out in IFRS S1 and IFRS S2. An entity cannot rely on this mapping tool as the basis for compliance with ISSB Standards. For more information and resources, visit the ISSB knowledge hub and disclaimer.

\$1 \$2

IFRS S1 and IFRS S2 are complementary standards to integrated reporting

- → they can help populating an integrated report with material and comparable standardised disclosures for users → IFRS S1 and IFRS S2 can help to strengthen the quality of integrated reports by potentially filling in some of the current reporting gaps
- Experienced integrated reporting adopters are well positioned to be the **frontrunners in the voluntary adoption** of IFRS S1 and IFRS S2
- Integrated thinking remains a critical enabler for the adoption of integrated reporting, IFRS S1 and IFRS S2

Basel III Disclosures

Context:

- Introduced post 2007-2009 financial crisis, designed to strengthen risk management within banking
- 2021: Climate risks are financial risks¹
- 2023: Consultation paper on Pillar III Disclosure of climate-related financial risks²

About the proposed Basel III Climate Disclosure:

- Aims to:
 - > enhance financial stability through enhancing banks' disclosures
 - facilitate forward-looking risk assessments by banks
 - promote market discipline & transparency
 - enable market participants to make more informed decision-making
- Designed to complement the ISSB Standards³
- May include both qualitative (i.e. <u>Governance</u>; <u>Strategy</u>; <u>Risk Management</u>; <u>Concentration Risk Management</u>) & quantitative (i.e. <u>financed emissions</u> exposures to transition risks; <u>exposures</u> to physical risks, etc.) disclosure requirements for climate-related financial risks for banks
- May require disclosures in bank-specific metrics for quantitative climate disclosures (e.g. disclosures of exposures by credit quality of loans, etc.)
- May require disclosures of **forward-looking data** (e.g. forecasts of climate risk exposures)

ZOOM POLL

Select the appropriate answer

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

8. My disclosure objectives should consider...

- a. The ISSB Standards only.
- b. The ISSB Standards and regulatory requirements.
- c. Just regulatory requirements.
- d. The ISSB Standards, regulatory requirements and other sources of guidance.

Module 2 Summary

Connectivity is key

While disclosure is based around core content areas (governance, strategy, risk management and metrics & targets), it's important to remember the connections between them and ensure the same assumptions are being used to the extent possible throughout

Baseline + building blocks

Additional disclosures can be made in the general purpose financial report, beyond that required by S1 and S2, including to satisfy wider stakeholders and regulatory requirements. The key is to not obscure information provided to meet the requirements of S1 and S2.

ALIGN ACTIVITY

Identify where you are now and where you want to be

- 1. Conduct a gap analysis to determine what areas your organization is not yet communicating to investors on. There is a simplified checklist in the homework sheet which can be used to start to identify key aspects of disclosure that should be considered for a high-level gap assessment.
- Identify what 'enhancements' or additional reporting requirements your
 organization wants to consider when setting a goal for sustainability-related disclosure
 practices.
- 3. Consider if there are additional topics, reporting processes or skillsets that may be required to meet your disclosure objectives.

Visit www.menti.com and type the code that we are sharing in the chat

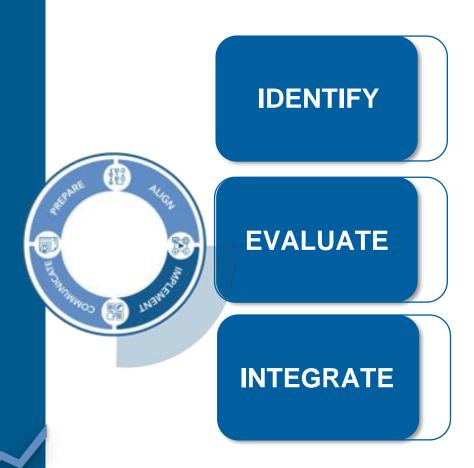

What are the key gaps you need to address in your current disclosures or internal processes?

MODULE 3

The backbone of effective disclosure – processes and practices

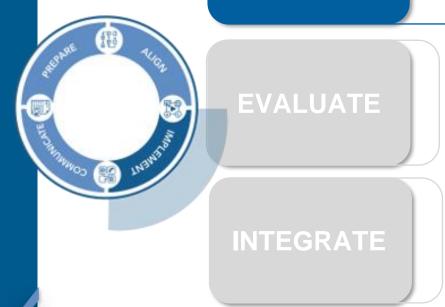

IMPLEMENT

IMPLEMENT

IDENTIFY

Identifying sustainability-related risks and opportunities

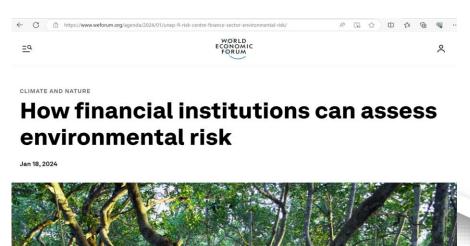

Launch of UNEP FI Risk Centre at WEF Annual Meeting Jan 2024 in Davos

"Climate and nature risks are real but often underpriced and overlooked. Climate change is making parts of the world uninsurable. The degradation or collapse of ecosystems is disrupting supply chains, Food producers, for example, could face higher costs as natural pollinators vanish. We know this as UNEP does the horizon watching via the global environmental outlook, the global chemicals outlook, and other key publications." – Inger Andersen, Executive Director, UNEP (Access the recorded session here)

We see the need for a unified risk approach to provide the baseline for unified action. Following our role supporting the establishment of the TNFD and our earlier work in support of the TCFD we are happy to be rolling out UNEP FI Risk Centre this year. That will address the climate, the nature, the environment and other emerging risks." (Read our article on WEF here)

Risk Centre 2024/2025 overview

NGFS Short-term climate scenarios

The Risk Centre provided a wide range of technical programmes and resources on sustainability risks

	OPEN TO ALL UNEP FI MEMBERS	PAID WORKING GROUP PARTICIPATION
Technical Programmes	 Webinars and skill-building workshops: Opportunities for financial institutions to engage with central banks, supervisors, academics, industry experts, modelers, and peers on various risk-related matters Discussions and Q&As with experts and peers on timely topics Practical guidance for implementing methodologies and best practices to assess and manage risk 	 In-depth working groups: Spanning between 3-12 months, working groups allow for an in-depth exploration of sustainability risks Collaborate with peers and industry experts to develop new resources and outputs, including guides, tools, and reports Set industry practices and benchmarks on key risk topics Shape Risk Centre activities and identify key areas of focus or risk for your institution
Outputs	 Climate Risk Scenario Analysis for the Trading Book Info session on credit risk benchmarking exercise (2) Panel discussion: Can 2024 deliver on international finance? IMPLEMENT

IDENTIFY

EVALUATE

Evaluating the risks and opportunities and testing resilience

INTEGRATE

Resilience & addressing uncertainty

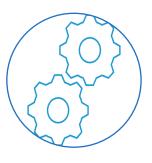

Use climate-related scenario analysis to assess your climate resilience

Climate resilience assessment

- Implications of climate change for the company's strategy and business model; and
- Company's financial & operational capacity to adjust/adapt over short, medium and long term.

Inputs and key assumptions

- Use relevant scenarios, and provide information about scenarios selected; and
- Provide information on assumptions used.

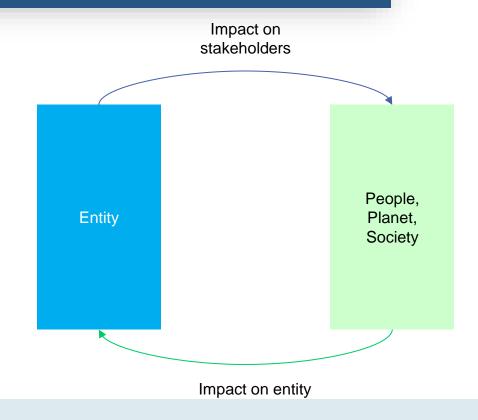

Scenario Analysis Alignment

Example source: <u>CEMEX, 2022 Integrated Report</u>, p. 258

SCENARIO NAME	STATED POLICIES					SUSTAINABLE DEVELOPMENT					NET ZERO EMISSIONS BY 2050							
Short name - external reference scenario	STEPS				SDS					NZE								
STRATEGY EFFECTIVENESS: RISKS AND OPPORTUNIT	IES																	
RISKS	PROBABILITY			IMPACT		PROBABILITY		IMPACT		PROBABILITY		IMPACT						
Reduced market demand for higher-carbon products/ commodities	LOW	MED	HIGH	LOW	MED	HIGH	LOW	MED	HIGH	LOW	MED	HIGH	LOW	MED	HIGH	LOW	MED	HIGH
Physical: Increased business interruption and damage across operations and supply chains with consequences for input costs, revenues, asset values, and insurance claims																		
Increased input/operating costs for high carbon activities under regulated markets (even threats to securing license to operate)																		
Risk of stranded assets: plants that cannot be easily upgraded and close to end of their lifetime																		
OPPORTUNITIES																		
Increased demand for energy-efficient, lower-carbon products and services																		
New technologies available at competitive cost that disrupt markets																		
Access to competitive energy sources (AF cost)																		
Opportunity to enhance reputation and brand value																		

The EU Approach to Materiality¹ How the EU defines double materiality

ENVIRONMENTAL & SOCIAL FINANCIAL MATERIALITY MATERIALITY To the extent necessary for an understanding of the ...and impact of its activities company's development, performance and position... Company impact on climate can be financially material climate change company impact on company impact on climate COMPANY COMPANY CLIMATE CLIMATE Primary audience: Primary audience: CONSUMERS, CIVIL SOCIETY, EMPLOYEES, INVESTORS **INVESTORS**

- Materiality is a concept relevant for sustainability-related disclosures
- Two types of materiality:
 - Financial materiality: assessing information that can impact a company's financial performance and statements, influencing economic decisions, incl. potential financial impacts of sustainability matters
 - Non-financial / impact materiality: how companies' operations and decision-making could potentially influence external factors, incl. the impact on people, society and the environment

1) European Commission, 2019

Using SASB for materiality assessments^{1, 2} SASB materiality map could be useful for IFRS S1, S2 disclosures

		Consumer Goods			Extractives & Mir	Extractives & Minerals Processing		
Dimension	General Issue Category ^①	Click to expand	Coal Operations	Construction Materials	Iron & Steel Producers	Metals & Mining	Oil & Gas – Exploration & Production	
Environment	GHG Emissions							
	Air Quality							
	Energy Management							
	Water & Wastewater Management							
	Waste & Hazardous Materials Management							
	Ecological Impacts							
Social Capital	Human Rights & Community Relations							
	Customer Privacy							
	Data Security							
	Access & Affordability							
	Product Quality & Safety							
	Customer Welfare							
	Selling Practices & Product Labeling							

SASB, now part of ISSB, offers useful resources on potentially *financially material sustainability topics* specific to 77 *industries*

Example of materiality assessment (1/2)¹ How UBS approached the exercise

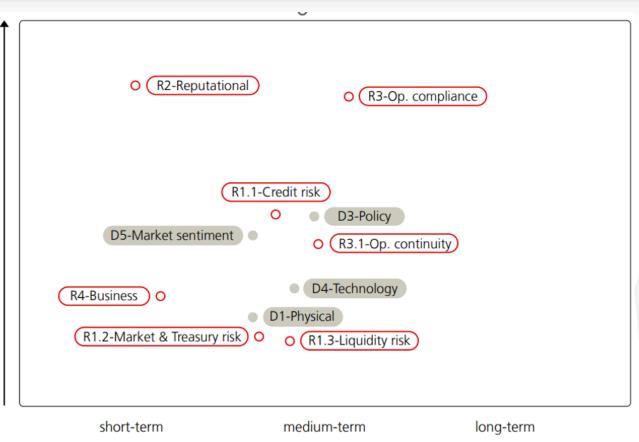

Risk ratings cover all business divisions & product/service offerings within, by considering:

- Inherent risk at product/service level;
- Effects of climate risk drivers on bank / clients / investees / assets

nighest risk

owest risk

- Climate risk transmission channels
- Primary risk differentiator (e.g. portfolio concentration in hard-to-abate sectors)
- Risk amplifier (e.g. macroeconomic feedback loops)

Legend explanation:

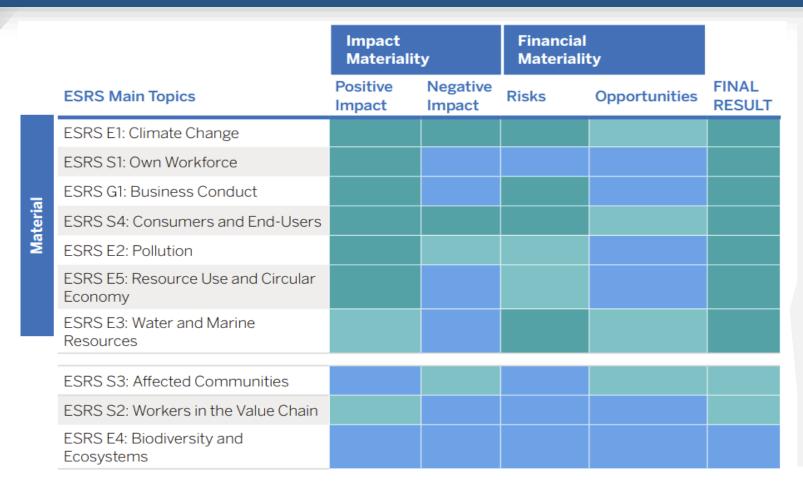

- Short-term: < 3 years
- Medium-term: 3 10 years
- Long-term: > 10 years

NOTE: IFRS S1 & S2 require disclosures on:

- The effect of sustainability- & climate-related risks and opportunities on an entity's financial position in short-, medium-, and long term;
- How reporting entities define short-, medium-, and long-term

Time horizon

Example of materiality assessment (2/2)¹ How Garanti BBVA approached the exercise

The bank referred to resources, incl. existing standards / frameworks to do their TSRS 1 & TSRS 2 disclosures, some of these resources include:

- IFRS S1 (TSRS 1) & S2 (TSRS 2)
- the SASB Standards
- · The ESRS topics
- · GRI Standards
- ENCORE
- Stakeholder surveys
- UNEP FI resources

NOTE: TSRS 1 and TSRS 2, released by Kamu Gözetimi, Muhasebe ve Denetim Standartları Kurumu (KGK) and published on the official gazette on 29 December 2023 are based on IFRS S1 and S2. According to the KGK, entities shall report using TSRS 1 and TSRS 2 for annual reporting periods beginning on or after 01 January 2024. The scope of applications has been updated based on a 06 March 2025 announcement.

IMPLEMENT

INTEGRATE

Development of new processes and integration of new considerations

Considerations when creating or adjusting processes

A company's management should assess existing systems and processes or determine whether new systems and processes are needed. Management may consider:

- Gap analysis –check for gaps in existing systems and processes;
- Suitability evaluate existing processes for identifying sustainability-related risks and opportunities;
- Prioritisation criteria for example, likelihood, impact, vulnerability, speed of onset;
- Controls evaluate existing internal risk controls;
- Contributors for example, departments with relevant processes and expertise to contribute;
- Interconnections between different internal and external factors; and
- Uncertainties from sustainability-related risks and opportunities.
- Resources in place to manage existing / new systems and processes

Source: WBCSD ESG Disclosure Handbook

Using a disclosure plan

By developing a disclosure plan as a stand-alone strategy or as part of a wider disclosure strategy, you can:

- Take control of your narrative
- Support internal collaboration, knowledge sharing and cross-functional team discussions with staff
- Create a reference point and audit trail, including where and how judgements have been made

ZOOM POLL

Select the appropriate answer

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

9. Is a disclosure plan required by the IFRS Sustainability Disclosure Standards?

- a. Yes, you must disclose your plan.
- b. No, but it's a very helpful tool!

Module 3 Summary

Connections are key (within and outside a company)

Risks and opportunities come from interactions between the company and its stakeholders, society and nature. These interactions will connect to multiple sections of disclosures and should be connected appropriately.

Use consistent assumptions

When evaluating risks and opportunities through tools like scenario analysis, make sure that the assumptions you use are consistent to the extent possible throughout the organization.

Don't start from scratch

You may **already** be collecting the data you need, but for another purpose. If you are not, you may be able to use existing processes and **adapt** them to the new needs.

IMPLEMENT ACTIVITY

Building on the gaps identified in the previous section, identify which of the gaps require new processes or systems in place to achieve your disclosure objectives

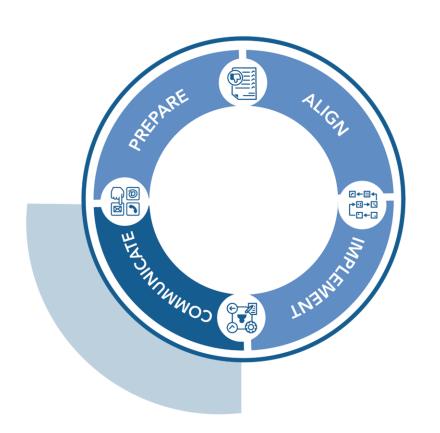

- Data collection: Identify how you can collect the data that is not being collected but is required to be disclosed by IFRS
- Data management: Identify what teams are responsible for managing this data and what synergies can be capitalized on
- Integration: Consider how these requirements can be integrated into your organization's strategic decision-making processes

Visit www.menti.com and type the code that we are sharing in the chat

What existing systems and processes for data collection can be adapted?

MODULE 4

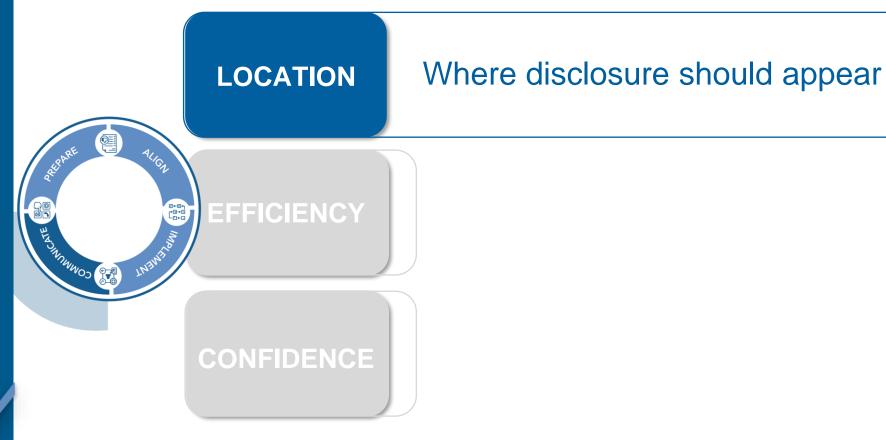

Communicating with investors – what, where and how

COMMUNICATION

COMMUNICATION

Holistic reporting package

INVESTOR FOCUSED

MULTI- STAKEHOLDER FOCUSED

Financial accounting

Sustainability-related financial reporting

What is material information?

ISSB indicates that information is material if omitting, misstating or obscuring it could reasonably be expected to **influence investor decisions**.

- Consider the characteristics of the investors and the company's own circumstances
- Different investors can have different and sometimes conflicting information needs
- Sustainability-related financial disclosures are intended to meet the common information needs of investors

Disclosing material information

When disclosing material sustainability-related financial information:

- Make it clearly identifiable (and do not obscure it)
- Use clear language
- Avoid scattering material information about a particular issue across disclosures
- Provide additional (non-material) information only if necessary but distinguish additional information from material information

IFRS Educational Material: Sustainability-related risks and opportunities and the disclosure of material information

ZOOM POLL

Select the appropriate answer

The zoom poll should appear on your screen momentarily. If it does not appear, feel free to answer in the chat box or message the hosts directly.

11. Information should be disclosed in the annual report when applying ISSB Standards if...

(Select all that apply)

- a. Omitting that information could reasonably be expected to influence investors' decisions
- b. It could reasonably be expected to affect the company's cash flows
- c. It exemplifies the values of the leadership team

Where to report for ISSB

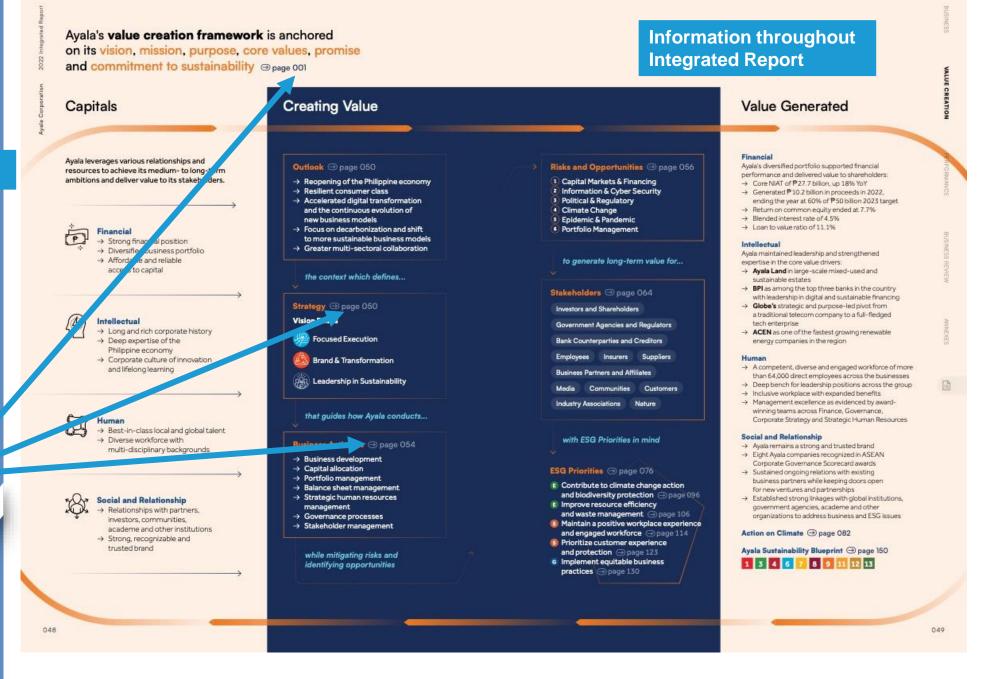

- Sustainability-related financial information is to be reported in the company's general purpose financial reports.
- Different requirements may apply in different jurisdictions.
- No requirements on exact placement of information.
- Examples of corporate approaches in practice:
 - Integrate
 - Separate
 - Navigate

Example

Integrating information

Page references

Evolution towards digital reporting

The ISSB Taxonomy provides the common elements (or 'tags') needed to make sustainability-related financial disclosures computer-readable

The ISSB Taxonomy reflects the requirements and accompanying materials of the ISSB Standards.

It does not introduce any new requirement.

COMMUNICATION

Effective Communication

This section sets out how a company might disclose its material sustainability-related financial information so that information is:

- Clear
- Distinguishable from other information
- Connected
- Comparable over time
- Succinct

Quality of information disclosed

To ensure quality of information, report prepares should remember:

- Provide comparative information
- Correct errors from previous years
- Minimize duplication
- Cross referencing to other reports meets conditions
- Information disclosed is:
 - Material
 - Connected
 - Aggregated or disaggregated, as appropriate

Cross-referencing

To keep general purpose financial reports succinct, companies can cross-refer to other reports they publish, provided that:

- Cross-referenced information is available on the same terms and at the same time
- The cross referencing enhances rather than obscures the ability of readers to understand the report
- The information included by cross-reference meets all the requirements of IFRS Sustainability Disclosure Standards
- The cross-referenced information is authorised in the same way as information in the general-purpose financial report
- It is clear where the cross-referenced information is located and how it can be accessed

Example

Cross-referencing

Connectivity with TCFD disclosures

Note expands on capital expenditures, cash flows, businesses impacted and more

Note explains considerations and assessment for decarbonization strategy

Note states climate change and policy risk considerations

Impact of Climate Change and Carbon Emissions Reduction Targets

Climate change risks including the impact of achieving the Group's carbon emissions reduction targets and the risks identified in the TCFD disclosures on pages 56 to 59 have been considered and assessed in the preparation of the Consolidated Financial Statements for the year ended 31 December 2022. There has been no material impact identified on the estimates and underlying assumptions made in the preparation of the Group's Consolidated Financial Statements as a result of climate change risks. In line with the application of our accounting policies, estimates and underlying assumptions are reviewed on an ongoing basis as we continue to develop and implement our strategy to meet our carbon emissions reduction targets. The table below provides details of where further information has been provided in these Consolidated Financial Statements.

Climate Change and Carbon Emissions Reduction Targets References	Pages
Impairment testing of goodwill and property, plant and equipment	182, 211
Useful lives of assets	186, 209
Provisions for liabilities	183
Inventories	187
Retirement Benefit Obligations	234

The Directors are aware of the ever-changing risks attached to climate change and regularly assess these risks against judgements and estimates made in the preparation of the Group's Consolidated Financial Statements.

In early 2023, the Science Based Targets initiative (SBTi) validated the alignment of our existing Scope 1 and Scope 2 carbon emissions reduction target to a 1.5°C warming scenario. The target previously aligned to a well below 2.0°C scenario. The Group's assessment is that the impact of the adoption of this updated target will not have a material impact on the estimates, judgements and assumptions set out in the relevant disclosures referenced above. The overall absolute Scope 1 and Scope 2 carbon emissions reduction target by 2030 is consistent with the previous target.

Cross reference to where targets have been considered in the financial statement

Commercially sensitive information

Companies are not required to disclose commercially sensitive information about a sustainability-related opportunity provided that:

- the information is not already publicly available
- disclosure of the information could reasonably be expected seriously to prejudice potential economic benefits the company would otherwise be able to realise;
- it is impossible to disclose the information without prejudicing seriously the economic benefits that would otherwise be realized;
- the company discloses the fact that it used the exemption for commercially sensitive information; and
- the company reassesses at each reporting date.

Consistent disclosures

Sustainability-related financial disclosures should be:

- Prepared for the same reporting company and reporting period as the financial statements
- Provided at the same time as the financial statements, as part of the general-purpose financial reports
- Include data and assumptions that are consistent with those in the financial statements, to the extent possible.

Aggregation / disaggregation

- Aggregate information to minimise scattering and increase understandability
- Do not let aggregation reduce understandability or obscure material information
- Disaggregate information to, for example:
 - Show the breakdown of sustainability-related risks by location; or
 - Distinguish resources drawn from environmentally stressed vs abundant areas

COMMUNICATION

CONFIDENCE

Maximizing confidence in disclosed information

Comparative information

- Disclose comparative information for the preceding reporting period for all amounts disclosed;
- For estimates: revise comparatives according to new information and explain differences.
- Specific requirements apply to redefined, replacement and new metrics.
- If it enhances understanding, provide narrative information for the preceding reporting year

Statement of compliance

- Companies are required to make an explicit and unreserved statement of compliance when they have met all the requirements of IFRS Sustainability Disclosure Standards.
- Commercially sensitive information about a sustainability-related opportunity can be omitted if conditions are met.
- Information prohibited from disclosure by applicable local laws and regulations can be omitted.

Things to remember

Ensure information is:

- Relevant
- Material
- Represented
- Faithfully
- Comparable
- Verifiable
- Timely
- Understandable

Ensure that investors can understand connections between:

- Sustainability-related risks and opportunities
- Disclosures on core content
- Sustainability-related financial disclosures and financial statements

Ensure that disclosures:

- Are for the same period and same reporting company as the related financial statements?
- Cover all material information that investors need, including on core content
- Include comparatives
- Include a statement of compliance

Module 4 Summary

Be clear about your audience

The **format of the disclosure matters** – make sure that when communicating to investors you're providing the information investors need in the format they will use.

Less is more

This is not a competition for the most words on paper. Only provide information that is deemed to be material and be as clear and concise as possible.

Be confident in your data

If you're not confident in the data you report, how will investors be confident in it? By keeping clear audit trails, **ensuring practices are well documented**, and having appropriate oversight, you can be confident in your data!

COMMUNICATE ACTIVITY

- Presentation approach identify whether your company should present information in an integrated format (in one report), an autonomous format (a stand-alone sustainability report) or a combination, and why.
- Navigation techniques brainstorm techniques that can be used to navigate the reporting format you choose and ensure information is easy to identify. Consider for example:
 - □ Navigation techniques, icons, indexes? Get creative!
 - ☐ Highlight connections between information
 - ☐ Put similar pieces of information together

Scenarios and Modeling

Global Benchmarking Report on Climate Risk Integration into Credit Risk Frameworks

 This report will provide a benchmark and comparison of credit risk modelling approaches used by financial institutions to assess climate risks.

Guidance on Climate Stress Testing Methodologies

 This report serves as a methodological guide for banks, outlining common approaches and key considerations for climate stress testing, supported with case studies and industry perspectives.

Reporting and Disclosures

Navigating the Evolving Landscape of Sustainability-Related Disclosures for Holistic Risk Management

This report will support financial institutions in implementing IFRS S1 & S2 while also addressing key aspects of transition planning and materiality disclosures covered in other standards, by providing practical case studies on topics incl. climate opportunity analysis, common variables in relevant risk / impact / opportunity assessments.

Risk Tools

Sustainability Risk Landscape Report

This report bridges Climate,
 Nature, and Social Risks with
 Integrated Management Practice.

Technical Supplement with ICE - Transition Financing of Hard-to-Abate Sectors

This report will be the result of the Phase 3 collaboration project with Intercontinental Exchange, which focuses on addressing the challenges of financing the transition in hard-to-abate sectors.

Beyond the Balance Sheet aims to strengthen sustainability and climate disclosure and drive sustainable finance in emerging markets

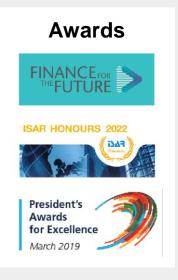

One-stop shop providing auidance. framework, capacity building, and technical assistance to improve sustainability and climate reporting tailored to emerging markets.

Tools and resources comprising an online platform, digital toolkit, e-learning, company selfassessment, and extensive information to navigate the fastevolving sustainability reporting landscape.

Training: jointly with UNSSE. CDP and IFRS Foundation. trained 35,000 participants in 100+ markets on climate and sustainability disclosure, expanding training to board members.

Public good for regulators and stock exchanges, providing resources and support to enhance transparency regulations in 20+ emerging markets.

Public good for companies and banks, providing resources to enhance their sustainability reporting journey and annual reports.
